

R D Castings continues to invest into the future

R D Castings has just taken delivery of 2 Agrati CF 350 ton Cold Chamber H series die castings machines, these additional machines will further extend our current Plant Inventory allowing the production of castings from 10 grams to nearly 10kg in both Zinc and Aluminium Alloys. These additional machines will be fitted with Agrati Auto Ladles, and feature full closed loop proportional PLC controlled shot ends, for total control over the complete shot cycle. As always these machines will be refitted to include our Patented Vacuum system that ensures the very best quality of casting possible for today's competitive markets.
